*Our Hallway door systems are designed and manufactured with durability, quick installation and ease of maintenance in mind. Standard features eliminate the need for options or upgrades. The best door, The best value...*

*That's the Janus Advantage*

## FEATURES

### ROLL-UP FRAMES

Essential to the structure of the self supporting system, the roll-up frame is designed to maximize strength and integrity while minimizing space. The 2" return offers stronger frame suited for roll-up door or Z-frame swing door installations. Single roll-up frames 6" to 12" and double roll-up frames 12" to 24" are made of hot dipped galvanized heavy gauge steel. Glossy white, white or galvalume are the colors in which these frames are available. All bases, channels and angles and fasteners necessary to secure the frames to the exterior walls, floors and/or ceilings are included with the frames.

### CORRUGATED SWING DOOR

Our swing door has revolutionized the industry. With re-enforced solid-square tube cross braces and 3" wide vertical stiles, this door is far superior to any others in the industry. Our patent pending latch with magnetic slide that is designed for an optional cylinder is factory installed on the swing. The silicone polyester paint on the doors is warranted not to chalk, chip, and crack, fade or peel, and also carries a 25 year film integrity warranty. Available in any of the 26 gauge colors, the system and swing make an attractive compliment or alternative to roll-up doors.

### SECURE WALL

The non-load bearing wall divider is manufactured in 20" wide section that locks together without the use of exposed screws. It is installed vertically to minimize dust. All channels and angles necessary to install securewall are included. Colors available are glossy white, and white.

### MIDSPAN

This hemmed heavy gauge channel further enhances the strength and integrity of our hallway systems. Offering additional support without having to utilize load bearing walls, this bracing is available in gloss white, white or galvalume.

### MESH

A cost effective method of keeping your tenants possession safe is the mesh and mesh angle stretched over the storage units. The 2"x 2" - 16 gauge mesh provides security between units while still allowing for adequate lighting and air flow inside each unit.

### CORRUGATED FILLER PANEL

An economical alternative to a flush header is the corrugated filler panel. This 26 gauge component is used in the same manner as the flush header-- to enclose the space between the door and top of the hallway. However, unlike the flush header panel, the filler panel can be manufactured in any of the door colors to accent the hallway or roll-up doors. All channel and angle necessary to install the filler panel are included.

Top angle is considered an accessory.

Door Systems

*A team of experienced door experts are ready and available to assist you with manufacturing facilities on the east and west coast.*

A one year warranty on workmanship and material.

Kick Plates are installed to protect the bottom of your hallway walls from scratches and dents that may occur as tenants move their belongings into a unit. These heavy gauge galvalume pieces are furnished hemmed on both the top and the bottom. Even though this is typically manufactured 12" tall in 10'0" lengths, custom sizes can be accommodated. The value of the kick plates is tremendous considering the wear and tear they take in order to keep the self storage facility attractive long after "the new" has worn off.

## KICK PLATES

Corner Guards are utilized to help protect your hallway corners from scratches, dents and dings that occur as tenants transport their belongings down the hallways to their unit. As a standard component of the Janus hallway system, the 3" x 3" - heavy gauge corner guards are hemmed on both sides and available in galvalume, white or glossy white. The optional mitered corner guard that further enhances the aesthetics of the hallway system is available for corners where an extended turning radius is desired.

## CORNER GUARDS

Corawall Hall Partition is an alternative to corrugated securewall. These 12" self-aligning panels interlock so that there are no exposed screws or edges except where attached at the top channel. Top and bottom channel included provides additional strength for supporting panels. An added insurance, the Protective Package is available to keep these walls dent and ding free once installed.

## CORAWALL HALL PARTITION

Hallway, light and entry soffit make finishing the ceiling and entrance of a storage facility economical and yet attractive. The different soffit types provide a clean finished look to the hallway and maximize lighting which is appealing to potential customers.

## SOFFIT

Unit Partition is manufactured in 20" wide sections and installed vertically. This 26 gauge galvalume wall is much more economical than sheet rock or wooded studs while it still provides the necessary level of security you come to expect in a wall. All channels and angles necessary to install the unit partition are included.

## UNIT PARTITION

## HEADERS

Manufactured out of heavy gauge material, the header encloses the area between the top of the door and top of the hallway system creating a smooth contemporary look to the flush hall system. It provides for a clean transition from wall to ceiling when using light soffit or solid ceiling and maximizes light reflection. All angle and fasteners required for install are included in the price of the header panel. Colors available are white, glossy white and galvalume.

## **JANUS INTERNATIONAL CORPORATION**

Janus International Corporation specializes in the production of storage facility components ranging from roll-up doors to self-sustaining hallway systems. The expertise and assistance provided to the customer from designing the unit mix to the final job site punch out is what sets our operation apart from the competition. Our meticulous attention to detail with the prints, manufacturing process, shipping and installation, offers every one of our customers assurance that we will get it right the first time. Sharing "how-to" knowledge of other facets of the storage industry allows us to guide novice business owners. Open lines of communication and understood expectation levels established early on in our relationships are key ingredients to our success. It is these qualities and services that keep Janus' customers coming back.
